

A Working
Manual for the
Exakta and the Exa
35mm Single-Lens
Reflex Cameras

EXAKTA

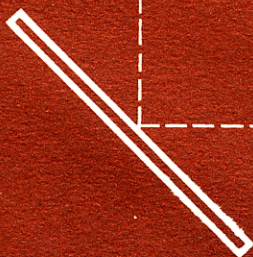

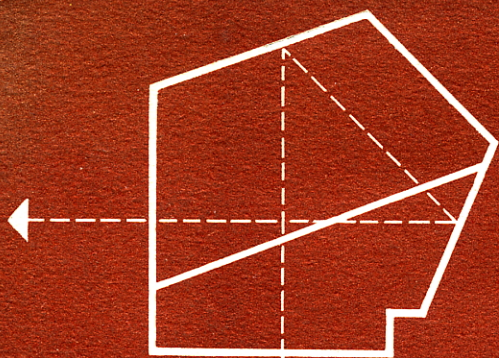

Photography

SPECIAL SECTIONS:

BY JACOB DESCHIN

LYNWOOD M. CHACE
Nature Photography

JULIUS WEBER
Medical Photography

Contents

Preface	8
Chapter One	10
<i>The Reflex Way—Two Versions</i>	
<i>The conventional reflex hood and the Pentaprism.</i>	
Chapter Two	14
<i>The Two Cameras—An Introduction</i>	
<i>The parts of the Exakta and the Exa described and illustrated in detail; earlier Exakta models; “dry run” for the Exakta and the Exa.</i>	
Chapter Three	28
<i>The Basic Lenses</i>	
<i>The standard lenses for the Exakta and Exa; explanation of terms focal length, lens speed, lens openings; the automatic diaphragm; the bayonet mount; care of lenses.</i>	
Chapter Four	35
<i>Working the Shutters</i>	
<i>Light volume the key to exposure; the Exakta VX focal-plane shutter and how it works; operating the transport lever; the fast-speed knob; double exposures with the VX; the slow-speed knob; the delayed-action release; the Exa drum-type shutter.</i>	
Chapter Five	44
<i>Loading the Cameras, the Film They Take, the Filter Controls</i>	
<i>Loading sequences for the Exakta VX and the Exa; the choice of film; quality of film's response; film list; film packaging; bulk loading; film characteristics; filters change film response; how a filter works; the filter factor; filter variety; filter do's and don'ts; the polarizing screen; filter mounts; filter list and uses.</i>	

Chapter Six	64
-------------------	----

Reflex Viewing and Focusing

The reflex hood components; differences in VX and Exa hoods; the prism finder; the distance scales; focusing the ground glass image; the field of sharp focus; depth-of-field tables; the point of focus; the depth-of-field scales; zone focusing, pre-focusing; illustrated methods of holding the cameras; steadying the camera.

Chapter Seven	81
---------------------	----

Exposure Variables

The speed of the film; the amount of light illuminating the subject; the amount of light reflected from the subject; the distance of the light source from the subject; viewpoint of the camera relative to the direction of the light; light contrast and quality; reflections from surrounding objects or surfaces; movement of subject; panning and the focal-plane shutter; measuring exposure; how to use the exposure meter; astronomical sky spectacles; shooting moon with Exakta on telescope; exposure data for moon and sun.

Chapter Eight	95
---------------------	----

Lenses for the Exakta

Factors affecting choice; angle of field coverage; preset and automatic diaphragms; range of apertures; the "normal" lens; more area with the wide-angle; the telephoto is more selective; shallow depth of the telephoto; telephoto steadiness; picking the first extra lenses; camera distance is key to perspective; control through perspective.

Chapter Nine	116
--------------------	-----

The Camera Moves Closer

Two classes of close-ups; supplementary lenses; extension tubes; bellows extension; the close-up factors; exposure for close-ups; close-up meter readings; films for close-ups; focusing; special focusing glasses; the Magnear lens-viewfinder; the microscope adapters; copying techniques; lighting, filtering.

Chapter Ten	129
-------------------	-----

Photography in Color

New films and processing; lighting and exposure filter controls; balancing light quality; viewing color slides; processing color film at home; reel should admit light freely; the Anscochrome and Ektachrome processing time schedules compared; processing outfit for color film; color prints from slides; black-and-white prints from color slides.

Chapter Eleven	135
----------------------	-----

Light Sources: Flash, Electronic, Flood

Exakta and Exa flash synchronization; focal-plane flash lamps; special lamps; flash exposure; electronic flash; flash techniques; bounce light; sun-flash synchronization; flood and spot lights; data table of flash lamps.

Chapter Twelve	143
<i>Processing the Miniature Negative</i>	
<i>Equipment and developing routine; fixing; washing; development variables; forced development; development by inspection.</i>	
Chapter Thirteen	148
<i>Nature Photography With the Exakta, by Lynwood M. Chace</i>	
<i>Photographing the blossoming bud of the black-eyed Susan; photographing the life cycle of the black swallow-tail butterfly; the mirror reflector; techniques for turtles; the turtle lays an egg; underwater at the aquarium; tripods and a blind; the medium telephoto is best; the photographer up a tree; Exakta and microscope.</i>	
Chapter Fourteen	163
<i>Medical Photography With the Exakta, by Julius Weber</i>	
<i>How photography helps the doctor; photography of patients; advantages of a small camera; use of electronic flash; the background for the clinical photograph; the legal release form; photographing the gross specimen; arrangement of unit specimen; the background for the gross specimen; preparation of the microscopical specimen; photomicrography; the choice of illuminant; features of a good lamp; aligning the apparatus and taking the photomicrograph; timing the exposure; photomacrography; illumination of the specimen in low magnification photomacrography; the contrast of the photomacrograph; cavity illumination in endoscopic photography; exposure evaluation and timing.</i>	
Index	191
