

EXAKTA

WERNER WURST

MANUAL

CONTENTS

I. Miniature photography	11
Convenient exposure material	12
Rapid film transport	13
Great depth of field	13
Fastest lenses	13
Miniature film for all tasks	14
II. The camera	15
Kine-Exakta I to EXAKTA Varex IIb (structural characteristics)	15
The essential parts of the camera	18
Conversion	20
1. The principle of the EXAKTA Varex	21
Good pictures are easily chosen	23
No parallax	24
The instructive reflex image	25
Reliability, economy, versatility	26
2. The EXAKTA Varex – a multi-system camera	28
The finder hood and its use	29
The penta prism and its use	38
The Fresnel lens with split-image rangefinder, a valuable focusing aid ...	44
The EXAKTA Varex and the spectacle wearer	48
3. How to use the camera	49
The shutter	49
The film in the EXAKTA Varex	55
The back of the EXAKTA Varex models VX, IIa and IIb	63
The lens	64
Depth of field table	70
Standard lenses (table)	83
The special lenses of the EXAKTA Varex	85
Special lenses (table)	94
The flash contacts of the EXAKTA Varex	107
Care of the camera and its optical equipment	110
Small accessories	114
4. The 24 × 36 mm EXA models	117
III. Films and filters	121
1. The general sensitivity of the film	122
2. The resolving power and the contour sharpness (acutance) of the film ...	124
Silver bromide grain and graininess	125

Anti-halation backing of the film	130
Testing the film	132
3. The gradation of the film	132
What does the sensitometric curve tell us?	134
The gamma	136
4. The colour sensitivity of the film	140
Colour-blind material	140
Orthochromatic films	141
Panchromatic films	141
Super panchromatic films	143
5. Other properties of the film	144
Anti-scratch protection	144
Storage properties	144
6. Correct film choice	146
35 mm films of approximately 8-32 ASA	146
35 mm films of approximately 40-50 ASA	147
Black-and-white 35 mm films (table)	148
35 mm films of approximately 100-125 ASA	151
35 mm films of approximately 250 ASA and above	151
The special films for special tasks	152
How is miniature film sold?	154
Loading 35 mm films by the user	156
7. The correct filter for black-and-white film	157
Effect of the various light filters	158
Yellow filter	163
Yellow-green filter (pale)	164
Green filter	164
Orange filter and red filter	166
Infra-red filter	166
Blue filter	167
Ultra-violet absorbing filter	167
Sky filter (yellow or green)	168
Polarizing filter	168
Optical and mechanical properties of the filters	171
IV. Exposure technique and pictorial composition	172
1. Focusing and stopping down	172
Point focusing	174
Point focusing with increased zone of sharpness	174
Hyperfocal-distance setting	175
Infinity setting	177
Snapshot setting	177
Further focusing tips	178
2. The exposure	179
Sufficient density in the negative	179
Aids to correct exposure	183
Exposure scheme	184
Types of movement affecting picture sharpness and shutter speed	187

3. Pictorial composition	189
The 'light' picture	190
Perspective in composition	193
Correct camera position	194
The background is essential	196
The typical miniature picture	197
4. Special fields	198
Photography in town and country	198
People in pictures of landscape or town	199
The human element in the picture	208
Sports	221
Animal pictures	222
Artificial-light photography	228
Photographic lamps (table)	237
Exposure table for artificial-light photography	239
Quartz-iodine lamps (table)	246
Flash technique	247
Tables for the use of flash bulbs	255
Still life and inanimate objects	262
Small objects - huge	264
Near-focusing tables and formulae	281
Depth-of-field tables for close-up photography	289
Reproductions	304
Copying of originals (table)	312
Photomicrographs	319
Stereo-photography	337
Ultra-violet and infra-red photography	345
Special tasks in science, technology, and art	352
Photography in natural colours	370
Colour temperatures of light sources (table)	385
V. Darkroom technique	409
Miniature technique is precision work!	409
1. The way to the miniature negative	409
Exposure and development	409
Tips for the use of all developers	415
The technique of development	417
Fixing - washing - drying	430
Storage of the 35 mm films	432
Criticism and improvement of negatives	434
What to do, if ... (hints for the improvement of negatives)	436
Mechanical damage to negatives	438
2. The last step to the final picture: Printing and enlarging	439
Darkroom illumination	439
Contact printing of 35 mm negatives	439
The enlarging of 35 mm negatives	440
The practice of enlarging	445
Good photographs earn good money	460

V I. Projection	461
The transparency	461
Projecting	466
Slide viewers	467
The reader has the last word	468
Index	469
