EXAKTA

EXAKTA VAREX IIB

Features are folding rewind crank, 17-speed shutter with geometric (equidistant) speeds from 12 seconds to 1/1000th. Shutter speeds from 6 seconds to 1/1000th can be combined with delayed action. Exakta features which have withstood the test of more than 35 years are—film transport from cassette to cassette (or open spool may be used with rewind if required); built-in film cutter, synchronisation sockets for electronic and bulb flash; rapid lever-wind fully coupled to the focal plane shutter; quiet operating slow speeds mechanism and delayed action on all speeds from 1/1000th second to 6 seconds.

EXAKTA is available with either waist-level or eye-level viewfinders, the latter being better known as pentaprism. Both types are available with either standard viewing screen, or fresnel screen with stigmometer (split-image rangefinder). The fresnel screen has a network of very fine concentric rings incorporated in its construction which intensifies the brilliance of the viewed image, while the stigmometer makes critical focusing a pleasure. We recommend this viewing system, the cost being only £2/10/- (\$5.00) more than the standard screen. The Zeiss Stigmometer (without fresnel screen) is also available if required.

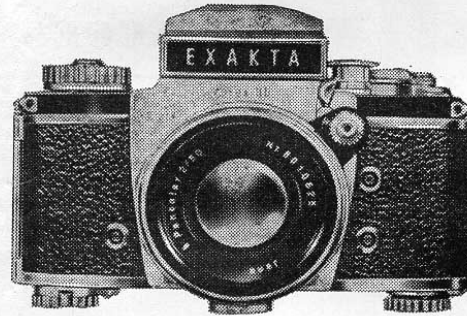

EXAKTA VAREX IIB with f/2.8 50 mm. fully-automatic Domiplan lens

EXAKTA VAREX IIB with f/2.8 50 mm. fully-automatic Tessar lens

EXAKTA VAREX IIB with f/2 50 mm. fully-automatic Pancolar lens

EXAKTA VAREX IIB Body only without viewfinder, lens or Ever-ready case £38 10 0 \$77.00
EXAKTA VAREX IIB Leather Ever-ready case

The various components of the **Exakta** camera may be purchased either separately or together, as the total price works out to the same whichever way the items are purchased. Prices of complete Exakta cameras are below. Prices of all lenses are on page 4, and viewfinder prices on page 5.

REVOLVING EYEPIECE

A special accessory to exclude extraneous light. Has provision for insertion of prescription lens (made by your local optician) to suit individual eyesight

No. 315

THE EXAKTA SYSTEM

EXAKTA and EXA cameras and accessories are made by Ihagee Kamerawerk Aktiengesellschaft, of Dresden, Germany. They are the result of forty years of combined development by Germany's most highly skilled craftsmen—the designers, metallurgists, optical technicians, precision engineers and quality-control inspectors of the Ihagee works.

In addition to EXAKTA and EXA cameras, there is a complete line of accessories. A range of lenses from 20 mm. to 1,000 mm. focal length; a wide variety of viewing systems; extension tubes and bellows attachments; micro and macro adapters; stereoscopic devices; reproduction stands; medical and scientific accessories. All these accessories fit all models in the Ihagee range. For photography from the infinitesimal to the infinite, it can truly be said that there is not a job EXAKTA cannot do—and do better than any other camera. EXAKTA equipment is used daily by professional photographers, scientists, research workers, physicists, astronomers, geologists, pressmen, and just plain amateur photographers.

EXAKTA and EXA cameras and accessories are sold and serviced in 76 countries throughout the world. They are distributed in Australia by a nation-wide organisation backed with all the specialised knowledge of factory-trained technicians and original Ihagee parts and service data from the factory.

Your EXAKTA or EXA will give you countless years of reliability and faultless photography; but when it eventually does need service, you will find EXAKTA agents anywhere in the world.

No matter if your choice is the popular EXA or the most complete EXAKTA outfit, you will get the same faithful service and accurate needle-sharp definition. And you will be stamped forever as a man who knows what he wants out of photography—and gets it.
