- Film Transporting Lever for Changing Film Quickly.
- Takes 8 Pictures 1⁵/₈x2¹/₂ in. on No. 127 Roll Film.

Because it is so versatile, the Exakta is suited to all professions and occasions. Newspaper work, scientific studies, and a wide range of artistic indoor and outdoor photography are all possible with the Exakta, because it takes ANY picture, ANY where.

Scientists and research workers can use tele-photographic or wide angle or employ supplementary lenses. Even in such cases, the mirror-reflected image will be absolutely reliable and the exact picture seen on the top screen. The lens can be changed whilst the camera is loaded. A press photographer equipped with an "Exakta" can surmount all obstacles. In a crowd, he can photograph over people's heads and watch the subject from below. Detectives will find that "Exakta" facilitates their work immensely as vertical pictures are taken at an angle of 90 degrees to the subject, and the photograph can thus be attained unobserved, which would be impossible by direct work.

The Exakta fits conveniently in your hand during the taking of a picture. The trapezoid form is not only attractive but insures the utmost utilization of space. Provided with reflex mirror, focal plane shutter, and the most rapid lens, the "Exakta" nevertheless appears to be hardly larger than an ordinary roll film camera. It is made entirely of metal, leather covered, and fitted with Tripod Bush and Cable Release. Shpg. wt. 4 lbs.

NIGHT EXAKTA Model B—With Biotar F:2 • • **\$225.00**

'EXAKTA JUNIOR'

The Junior model has the characteristic features of the Model B except that the shutter has automatic speeds limited to 1/25 to 1/500 and has no delayed action.

9150-P Ihagee Anastigmat F:3.5—7.5 cm..... 67.00

THE NEW "KINE-EXAKTA"

Uses standard 35 mm. film and gives unusually sharp 24x36 mm. pictures which can be enlarged to any print size. Always ready for use, it is quick in operation and, therefore, very suitable for series pictures. Built to use the most accurate lenses. With each of the varied objectives the final picture result is controlled by observation of the picture area, image sharpness, and depth of definition in the viewing hood before the shot is made.
